

B Multiple capabilities from a single model

OpenFlyV2 flexibly supports diverse vision-language and action tasks.

Semantic understanding

Q: What color is the building ahead?

A: Red.

Visual grounding

"Locate the red building."

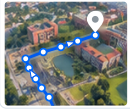

Spatial reasoning

Q: Is the tower to the left or right of the red building?

A: Right.

Navigation

"Follow the road to its end, turn right, and continue to the tower. Stop nearby."

C Simulation-only training, zero-shot real-world transfer

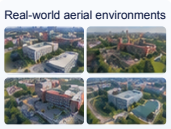

A large-scale simulation data infrastructure enables real-world deployment without real aerial training data.

70,000 navigation trajectories + **60,000** vision-language pairs

OpenFlyV2
(1B parameters)

Zero-shot deployment

D Onboard deployment on a physical UAV

Real-time, fully onboard vision-language-action inference on a resource-constrained platform.

DJI M30T + Jetson Orin NX
